THE OPPORTUNITY

Your traffic isn't the problem. The silence is.

Most visitors arrive with a question and leave without an answer. Every unanswered question is a visitor you already paid to acquire — walking away. DocuREST closes that gap with an AI assistant trained on **your** content that answers accurately, around the clock, in the visitor's language.

● Increase conversion

Answer buying questions instantly and guide visitors to signup, checkout or booking — up to 10× more engagement.

● Deflect repetitive tickets

Automatically handle the same questions your team answers over and over, freeing them for real deals.

● Capture & qualify leads

Turn conversations into qualified leads and hand off to a human when it matters.

Grounded in your content — not made up

Answers come only from the documents and pages you provide, with source citations. No hallucinations, no training on your private data.

— Key features

Everything you need to deploy a knowledgeable AI assistant across every channel your customers use.

- **Answers from your documents & website**

Upload PDFs, Word, spreadsheets and more — or just point us at your site and we crawl it. The assistant answers with citations.

- **Embeddable website widget**

Add one line of code and a chat bubble appears on your site. Fully themeable to your brand.

- **WordPress plugin**

Install the plugin, paste your key, done. No developer required.

- **Mobile SDKs**

Drop-in chat for iOS, Android, React Native and Flutter apps via a simple REST API.

- **Telegram bot**

Bring the same assistant to Telegram — text and voice, per tenant.

- **Voice & hands-free**

Visitors can speak their question and hear the answer — mic input plus text-to-speech.

- **95+ languages**

Ask in any language, get an answer in the same language — automatically.

- **Analytics & insights**

See what visitors ask, where they drop off, and what drives conversions.

- **Live human handoff**

Operators can jump into any conversation in real time when a human touch is needed.

- **Access roles & permissions**

Role-based access controls decide which documents each audience can see.

— Easy to install. Easy to test.

From zero to a working assistant in minutes — no engineering project required.

1

Add your content

Upload documents or paste your website URL and we build the knowledge base automatically.

2

It learns instantly

DocuREST indexes your content and is ready to answer — no manual training, no data science.

3

Deploy anywhere

Paste a script tag on your site, install the WordPress plugin, connect Telegram, or embed in your app.

Try before you commit

Start free — no credit card. Test the assistant on your own content, see real answers, and roll it out when you're ready. Most teams get real value on the free plan.

● One line of code

Add a single `<script>` tag and the chat widget goes live on your site.

● No-code friendly

WordPress plugin and website crawler mean marketers can ship it without developers.

● Fits your stack

REST API and SDKs for teams that want deeper, custom integrations.

— Deploy it your way

From fully managed SaaS to an air-gapped on-premise install — your data, your rules, your compliance requirements.

SaaS (hosted by Docurest)

The fastest path — fully managed and updated for you. Be live in minutes with zero infrastructure to run.

Private cloud

Your own isolated environment for stricter data-governance and tenancy requirements.

Dedicated server

Single-tenant hardware dedicated to your organization for predictable performance and isolation.

Fully on-premise

Runs entirely inside your network. Your data never leaves your walls — ideal for regulated industries.

WordPress

A dedicated plugin injects the assistant into any WordPress site with a paste-and-go setup.

Custom & white-label

Bring your own domain and branding, and connect to the channels your customers already use.

Same product, your choice of hosting

Every deployment model runs the same Docurest platform — start on SaaS and move to private cloud, dedicated or on-premise as you scale, without changing how it works.

— Security & trust

Enterprise-grade controls so you can put an AI assistant in front of customers with confidence.

- **Encrypted in transit & at rest**

Your documents and conversations are protected with strong encryption end to end.

- **Your data is never used to train models**

Content stays yours. It powers your assistant only — never shared or used to train foundation models.

- **GDPR-ready**

Built with data-protection requirements in mind, including data residency options for private/on-prem deployments.

- **Role-based access control**

Granular permissions govern who and which audiences can access which documents.

- **Answers with sources**

Every answer can cite the source document, so responses are auditable and trustworthy.

- **Data residency & isolation**

Private cloud, dedicated and on-premise options keep data within your chosen boundary.

— Simple pricing

Start free and scale as you grow. Enterprise and self-hosted plans are tailored to your deployment.

Free \$0 Everything you need to launch and test on your own content.	MOST POPULAR Pro \$29.99/mo More documents, more conversations, all channels and integrations.	Enterprise \$99.99/mo Higher limits, priority support, and self-hosted options.
---	---	--

Private cloud, dedicated & on-premise

Custom pricing based on scale, hosting model and support level. Request a quote and we'll tailor a plan to your requirements.
